

IN THE SPECIFICATION:

Second full paragraph on page 1 is amended as follows:

Such a kind of an abnormality detection support device includes a helmet, an infrared camera, a display, and a radio transmitter as disclosed in Japanese Utility Model Application Patent Application Publication Laid-Open (Kokai) No. 5-75892 (October 15, 1993). The infrared camera is fixed to an outer peripheral surface of the helmet. The display is attached to the helmet so that an image screen comes to the front of a head of a user wearing the helmet, and reproduces an image taken by the infrared camera. The radio transmitter is attached to the helmet and radio-transmits an image signal of the infrared camera to a radio receiver provided in a remote location.
